Lost Tank 4 Federal 17 30-015-37958 OXY USA Inc. January 6, 2011 Conditions of Approval

- 1. The 8-5/8 inch intermediate casing shall be cemented to surface and shall be set in the Fletcher Anyhydrite or Lamar Limestone, 100 to 600 feet below the base of the salt.
 - a. If cement does not circulate to the surface, the appropriate BLM office shall be notified and a temperature survey utilizing an electronic type temperature survey with surface log readout will be used or a cement bond log shall be run to verify the top of the cement. Temperature survey will be run a minimum of six hours after pumping cement and ideally between 8-10 hours after completing the cement job.
 - b. Wait on cement (WOC) time for a primary cement job is to include the lead cement slurry due to potash.
 - c. Wait on cement (WOC) time for a remedial job will be a minimum of 4 hours after bringing cement to surface or 500 pounds compressive strength, whichever is greater.
 - d. If cement falls back, remedial cementing will be done prior to drilling out that string.

The DV tool shall be placed a minimum of 50 feet below the intermediate casing shoe.

Centralizers required on directional leg, shall be type for directional service and minimum of one every other joint.

- 2. The minimum required fill of cement behind the 5-1/2 inch production casing is:
 - a. First stage to DV tool, cement shall:
 - Ement to circulate. If cement does not circulate, contact the appropriate BLM office, before proceeding with second stage cement job. Operator shall have plans as to how they will achieve circulation on the next stage.
 - b. Second stage above DV tool, cement shall:
 - Ement to circulate. If cement does not circulate, contact the appropriate BLM office before proceeding with third stage cement job. Operator shall have plans as to how they will achieve circulation on the next stage.
 - c. Third stage above DV tool, cement shall:
 - Cement to surface. If cement does not circulate, contact the appropriate BLM office.
