Describe Cause of Problem and Remedial Action Taken.\*

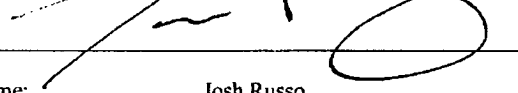

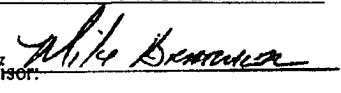

Oil was placed into a new tank where the 2" drain valve was left open. The drain valve has been closed.

Describe Area Affected and Cleanup Action Taken.\*

Initially 110bbls of oil was released from the 2" drain valve at the oil tank and we were able to recover 108bbls with a vacuum truck. All released oil was completely contained inside the facility berm wall which is lined with 40mil plastic. The spill area measured 30' x 60' inside the dike. All contaminated gravel was removed and disposed appropriately. Additional gravel was added to the facility as necessary. The facility has been restored to its prior condition.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
