13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Due to abbreviated 13-3/8" surface casing setting depth of 301' (instead of 430')*, Premier Oil and Gas proposes the following changes to the intermediate portion of the wellbore:

Increase hole size from 11" to 12.25" to allow 1" cementing of annulus if necessary. Change cement slurry to 500 sx. Class C with 4% gel lead cement (13.5 ppg, 1.75 cfps) followed by 250 sx. Class C with 2% CaCl₂ tail cement (14.8 ppg, 1.32 cfps) for a total slurry volume of 1203 CF. This volume assumes 10% excess between 13-3/8" and 8-5/8" from 0-301', 100% excess between 17.5" hole and 8-5/8" from 301-445' and 100% excess between 12.25" hole and 8-5/8" casing from 445-1275'.
