Artesia, New Mexico 88210

RE: Kent Shannon

Dear Mr. Cole:

Per your request I recontacted Mr. Wayne Atkins, 602 West McCune, Roswell, New Mexico and he advised at 910 feet he pumped 30 sacks of concrete and then pulled the tubing out of the hole leaving two joints. At this time he then pumped 10 sacks of concrete and it did circulate at the surface. Stated the pipe was full of fluid and there is possibly a space without concrete between the 910 feet and the bottom of the two joints.

Contacted Mr. Ray Willis, Hansen Oil Company, reference the Karma Well #1 and he advised they had filed the change of operator with the state authorities in Artesia to Mr. Slayton, however, they have not received the approval back from them.

Mr. Wayne Atkins also advised he had a rig approximately 30 miles from the location of Hi Lonesome No. 1 and he would certainly like to do any of the work which the state requests there at that well site and stated his hourly charge is \$35.00.

Respectfully submitted,

*Melvin L. Miller*
