

C. E. LaRue and B. N. Muncy, J..
Nola Federal No. 2
660' FSL and 660 FWL, Sec. 8, T 14S, R 28E
Chaves County, New Mexico

1. Topographic map attached.
2. 1320 feet of access road will be constructed. There will be no turnouts, surface is almost flat and no drainage requirements or culverts are planned. Maximum road width will be 12 feet and will be surfaced with caliche hauled over existing roads from the pit already established in NE $\frac{1}{4}$ NW $\frac{1}{4}$ NE $\frac{1}{4}$, Section 17. There will be no gates or cattleguards necessary.
3. Lease Map attached.
4. There will be no tank batteries, production lines, or service lines installed. All gathering lines will be installed by gas purchaser. In the event that this is not a producing well the road and pad area will be ripped, but both will be left as constructed for service and maintenance operations if the well is completed as a producer.
5. There are no rivers, creeks, lakes, ponds or wells in the lease area. All water for drilling will be trucked to location over present roads and the access road to be built.
6. Caliche for the drilling pad and access road will be trucked over present roads from the caliche pit already in existence in the NE $\frac{1}{4}$ NW $\frac{1}{4}$ NE $\frac{1}{4}$ Section 17.
7. All cuttings and muds used in the drilling operation will be contained in the pits at location, and will be covered as soon as they are dried. All other waste and garbage will be kept in containers on location and buried in another pit at completion. Other wells in area have had no oil or water produced during drilling or testing, so no disposal problem should occur in this proposed well.
8. No camps or airstrips will be constructed.
9. Attached plat. No cuts or fills will be required to construct or surface drilling pad other than minor leveling. No lining will be used for reserve pit. Road will come into drilling pad at its south edge; pad will be used for all turnaround area, parking area, and as storage for drilling mud if any is used which is not expected.
10. If well is completed as a producer the access road and pad will be used for lease maintenance and operations. Mud and reserve pits will be covered as soon as cuttings and drilling fluid have dried, probably about sixty (60) days. If well is not completed as a producer, access road and pad will be ripped in accordance with current requirements at the time the pits have dried sufficiently to be covered. Surface is such that no other drainage or erosion problems should be created.
11. Surface ownership is Federal in all areas where road and pit is to be constructed as are access roads now in use. Surface is relatively flat, with no areas in which fills are necessary to build roads. There are no gullies or hills along proposed road. No water wells, ponds, lakes or streams in lease area. No dwellings or structures in lease area. There is no evidence of any archeological, historical, or cultural sites anywhere.
12. Operators' representative is B. N. Muncy Jr., 416 East Main, Artesia, N. M. Telephone No. (505) 746-6651.
13. I hereby certify that I, or persons under my direct supervision have inspected the proposed drill site and access route; that I am familiar with the conditions which presently exist; that the statements made in this plan are to the best of my knowledge, true and correct; and that the work associated with the operations proposed herein will be performed by LaRue and Muncy and its contractors and sub-contractors in conformity with this plan and the terms and conditions under which it is approved.
