

9. WELLSITE LAYOUT.

- A. Exhibit C shows the relative location and dimensions of the well pad, reserve pits, and major rig components.
- B. The ground surface at this site is low rolling mounds 6-8 feet in height, and the well location is on the northerly slope of one of these mounds. Approximately 2-3 feet cut and fill will be required to level the pad area, which will be covered with at least six inches of compacted caliche.
- C. The reserve pits will be plastic lined.
- D. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE.

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk.
- B. Unguarded pits, if any, containing fluids will be fenced until they have been filled.
- C. This location being on fee land, cleanup operations will require no restoration other than filling and levelling as per agreement with Mr. Carleton Davis, surface owner. All pits will be filled and levelled within 90 days after abandonment.

11. OTHER INFORMATION.

- A. Topography: The wellsite is in an area of gentle rises reaching 6-8 feet in height over a lateral distance of several hundred feet.
- B. The topsoil at the wellsite is moderately hard sand.
- C. The vegetation cover at the wellsite is of a moderate amount, and consists primarily of prairie grass and miscellaneous weeds and prairie flowers. No wildlife was observed, but it is likely that typical semi-arid desert wildlife, such as rabbits, coyotes, gophers, rodents and snakes inhabit the area. The area is used for cattle grazing.
- D. There are five stock ponds located along the existing ranch road, the closest being approximately 2900 feet northwest of the proposed location. There are no lakes, streams or rivers within several miles of the wellsite.
- E. The nearest occupied dwelling is the Sand Ranch Headquarters residence located approximately 3500 feet northwest of the proposed location. There are no windmills in the area. A water well equipped with an electric pump is located approximately 3000 feet of the proposed location.
- F. The wellsite is located on privately owned surface as is the existing and proposed access road. The operator has come to an agreement with the owner of the surface as to wellsite, existing roads, and proposed access roads. See attached letter re-agreement between operator and this rancher.
