

8. ANCILLARY FACILITIES:

- A. None required.

9. WELLSITE LAYOUT:

- A. Exhibit "D" shows the relative location and dimensions of the well pad, reserve pits, and major rig components. The pad and pit area has been staked and flagged.
- B. There will be some cutting and filling of the wellsite in order to level the rolling 3 to 8 foot sand dunes.
- C. The reserve pit will be plastic lined.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave the wellsite in an aesthetically pleasing a condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management and the United States Geological Survey will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION:

- A. Topography: The land surface in the vicinity of the wellsite consists of rolling sand dunes up to 8 feet high.
- B. Soil: The topsoil at the wellsite is Mescalero sand.
- C. Flora and Fauna: The vegetative cover consists of very sparse miscellaneous grasses, sunflowers, shinnery oak, bear grass yucca, sage brush and other miscellaneous desert flowers and weeds. No wildlife was observed other than lizards and jackrabbits, but it is likely that other typical semi-arid desert wildlife inhabit the area, which is used for cattle grazing.
- D. Ponds and Streams: There are no rivers, streams, lakes or ponds in area, however, there are several ranch tanks as shown on Exhibit "B".
- E. Residences and Other Structures: There is a ranch house within 5000 feet southwest of the wellsite. See Exhibit "B".
