Gentlemen:

In reference to the Four Point Test conducted on our O'Brien Ranch Well No. 1, located in Unit G of Section 26, T-18-S, R-29-E, Chaves County, New Mexico, please note in an effort to keep the well flowing, the test was run in reverse. Although production rates were maintained during the testing procedures, the data recorded is inconsistent with a normal Four Point Test, due to the data plotting a negative slope (See Attached Graph). It is our conclusion that the data recorded was the result of the well loading up during the testing operations and that re-running the test would produce similar results. We are currently monitoring the subject well and will take action accordingly once the well ceases flowing.

Yours very truly,
