Unit G, 1980 FN&EL Section 26,
Township 8 South, Range 27 East, N.M.P.M.,
Chaves County, New Mexico
Well API No. 30-005-62177

Gentlemen:

Please accept this One-Point test in place of the 4-Point Absolute Open Flow test for the Pioneer "26" State #1.

The well had a static shutin wellhead pressure of 1600 psig. The well drew down to a wellhead flowing pressure of 100 psig in 75 minutes on a 12/64" choke.

At this flowing pressure the well tested 235 MCFGPD on a 24-hour test and for all practical purposes, this is the Absolute Open Flow Potential for the well.

Very truly yours,

D. E. Brown
Engineer
