17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS: (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Refer Sundry Notice dated 7-29-88. Completed operations: Started venting gas the morning of 8/1/88 at approximately 25 mcfpd and continued through the afternoon of 8/5/88. A slip-stream of gas (approximately 10 ft³ per hour) flowed across a small fixed bed reactor for the purpose of testing an arsenic removal process.

The test results were not encouraging with inlet pressures and temperatures to the reactor at approximately 200 psi and 75°F.

Refer Sundry Notice dated 8-29-88. Completed operations: Vented gas from 8/26/88 through 9/2/88 at approximately 50 mcfpd. The gas flowed across a fixed bed reactor of activated charcoal for the purpose of testing an arsenic removal process.

The test results were not conclusive running at ambient inlet temperatures and 200 psi inlet pressure to the vessel. The information gained will be useful in comparing this process with others currently running.
