Completion or Completion Report and Log form.

to propose to cable-tool drill and test the lower San Andres and Upper Yesso formations to a depth of approximately 2500'. A production string of 7", 5-1/2" or 4-1/2" will be set to TD, with cement and circulate as needed for production.

PROPOSED PROGRAM:

- 1" hole with 4-5/8" casing to approximately 700' with 350 sacks of cement
- 2" hole with 7", 5-1/2" or 4-1/2" production casing to approximately TD of 2500' with 100 sacks

W.D. PROGRAM: Only what and necessary in cable tool operation.

W.D.: A surface casing program using 8-5/8" set at 700 feet to protect the fresh water zone is proposed. If water flow presents problems shallower than the proposed surface TB then 10-3/4" casing will be used to cut off water flows. Once 8-5/8" casing is run to 700 feet then the 10-3/4"-casing will be pulled as it will not be cemented in place. Cement will then be circulated to surface behind the 8-5/8" casing.
