

5. A plat locating and identifying the well of interest and the outline of the proration unit. Also, identification and explanation of any other wells within the proration unit. ✓
6. A copy of the State Spacing Order or, as applicable, the appropriate reference to a State regulation and/or a Federal units agreement. ✓
7. For a new well which was spudded on or after February 19, 1977, and drilled as an additional well into an existing proration unit, a copy of the record developed prior to the commencement of drilling (as reasonably possible to do so), with geological and engineering support data included, sufficient to support a finding that the new well is necessary or a copy of the State Spacing Order allowing the exception well within the spaced area. Also, support data acquired after commencement of drilling, as appropriate. N/A

8. Other: _____

*Will be renumbered within BLM 3162 series following conversion of operating regulations from Title 30 to Title 43 of the CFR.
