The elevation of the derrick floor above sea level is ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this wall with cable tools to an approximate depth of 6501 unless commercial production is found at a leaser depth.

We prepare to drill a 12 1/2" hole to 150" and set 10 3/4" cosing with mud to surface.

If commercial, we propose to set  $5 \text{ i}/2^n$  casing at total depth and coment to surface.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced. Address 200 Ca

## INSTRUCTIONS FOR COMPLETION OF FORM C-128

- 1. Operator shall furnish and certify to the information called for in Section A.
- 2. Operator shall outline the dedicated acreage for both oil and gas wells on the plat in Section B.
- 3. A registered professional engineer or land surveyor registered in the State of New Mexico or approved by the Commission shall show on the plat the location of the well and certify this information in the space provided.
- 4. All distances shown on the plat must be from the outer boundaries of the Section.
- 5. If additional space is needed for listing owners and their respective interests as required in question 3 of Section A, please use space below.
