DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was formerly operated as the Burnhill Los Hornos State #1 well.

It is planned to pull rods and tubing, squeeze off present perforations at 1900-1905 feet, re-perforate the oil zone and sand-zone with 10,000 gallons with 15,000 pounds of sand added. Well will then be cased and placed on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
