DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill well to Queen formation at about 1500 ft. Set 8 5/8" casing with shoe at approx. 250 ft. cemented with 25 sacks cement. Drill hole to approximately 1450" and reduce same and drill through Queen at about 1500 ft. If Queen justifies testing will run 5 1/2" casing at 1450 and cement with 50 sacks cement. If Queen does not justify testing will straight run from 1450 to bottom of hole and deepen to approx 2100 ft and reduce hole and drill into San Andres. If justifies testing will run 5 1/2" casing at approx. 2100 ft. with 50 sacks cement. If not will plug and abandon. Will furnish sample log when well is completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
