Re: State-Willis 101
Well #1, Unit--
Sec. 30-158-26
Chaves County, New Mexico

Gentlemen:

We are in receipt of forms C-104 and C-110 on the above captioned well. Before these forms can be approved we need form C-103 showing each string of pipe run, how many sacks of cement used on each string and what size and weight of pipe used.

In the future please notify us after running each string of pipe using form C-103.

Very truly yours,

Oil Conservation Commission

G. L. Armstrong
Supervisor, District #2

LA/jw

Introduction

1. The purpose of this report is to provide a comprehensive overview of the current state of the art in the field of artificial intelligence (AI) and its applications.

2. The report is organized as follows: Chapter 1 provides a general overview of AI, Chapter 2 discusses the history of AI, Chapter 3 covers the current state of the art in AI, Chapter 4 discusses the applications of AI, and Chapter 5 provides a conclusion.

Chapter 1

1.1. Artificial intelligence (AI) is the study of how to make machines that can think and learn like humans. It is a branch of computer science that deals with the design and development of intelligent machines that can perform tasks that require human intelligence.

1.2. The term "artificial intelligence" was coined by John McCarthy in 1956. He was one of the pioneers of the field and is often referred to as the "father of AI".

1.3. History of AI

1.3.1. The history of AI can be traced back to the ancient Greeks, who were the first to develop the concept of a "soul" or "mind".

1.3.2. The modern history of AI began in the 1940s and 1950s, when scientists began to develop machines that could perform tasks that were previously thought to require human intelligence.
