The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate points, and all other important proposed work)

1. Operator will drill 11" hole from surface to approximately 350' and set 8 5/8" casing. Cement will be sufficient to circulate.
2. A 7 7/8" hole will be drilled from 350' to an estimated 2950' to test San Andres with air. Approximately 150' of core will be cut.
3. In the event of a producing well 5 1/2" or 4 1/2" casing will be set and cemented at total depth

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
