Re: Patrick Federal 1 and 2
Lease # LC 069817

Attn: Phil Kirk
Area Manager

Dear Sir:

In reply to your letter of May 5, 1985 regarding testing of the referenced Patrick Federal 1 and 2, I have included the following information.

Patrick Fed No. 1 : 660' FSL & 1650' FWL
Sec. 12-T15S-R29E
5-1/2" casing set at 1993'
Perfs: 1964 - 1985
2-3/8" tubing set at 1855'

Patrick Fed No. 2 : 1980' FSL & 1650' FEL
Sec. 12-T15S-R29E
4-1/2" casing set at 2100'
Perfs: 1956 - 1970
2-3/8" tubing set at 1956'

These wells are Queen gas wells which are low pressure, low volume wells. Both wells are capable of production but are shut in waiting on a pipeline. The wells are completed without a packer in the hole and it would cause tremendous damage to the well to kill the well in order to run a packer to perform the casing test. Therefore, we request that an exemption be granted to the casing test in order to prevent unnecessary damage to the wells. Should the well have to be killed in the future, we will notify the Bureau of Land Management and perform the required test.

Your cooperation in this matter will be greatly appreciated.
