proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones perti-  
nent to this work.)\*

This is to request that the producing interval (3330-3340) be given a  
new classification or designation as a new producing zone as it is not  
productive in any other area in SE New Mexico

The new designation suggested is the "Sulimar Sand" of the San Andres.

This producing zone is not equivalent to the Slaughter Zone of the  
San Andres, but is approx. 100' below the Pi marker.
