...and the \mathcal{H}_2 norm of the system is

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28°C. The cell concentration was adjusted to 10⁸ cells/ml. The cell suspension was mixed with the plant tissue and incubated for 24 h at 28°C. The plant tissue was then cultured on the selective medium. The transformation efficiency was determined as the number of transformants per 100 mg of plant tissue. The data are the mean ± SD of three independent experiments.

[illegible]

Figure 1. The effect of the number of trials on the mean accuracy of the classification results. The error bars represent the standard deviation of the mean. The asterisks indicate significant differences between the two groups ($p < 0.05$) according to the Student's *t*-test.
