Eddy

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3595 ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total brigid back depth of this well was 1,029' and the hole was filled completely with mud. The hole was then plugged back to 957' with rock and gravel and set 90' plug from 907' to 957' using 14 sacks of regular cement. Tubing then lifted to 640' and put in a 150' plug from 490' to 640' using 31 sacks of regular cement. Put cement bridge at surface using 5 sacks of regular cement. Screwed in 7" bull plug nipple in top of 7" collar extending 6 feet above surface of the ground. This completed plugging and abandonment of this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
