Well No. **1** is located **1400** ft. from **N** line and **2310** ft. from **E** line of sec. **1**
NE/4 SE/4 NW/4 **17S** **27E** **NMPM**
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat **Eddy** **New Mexico**
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to an approximate total depth of 2100' to test the San Andres formation. We will run approximately 500' of 8 5/8", 1450' of 7" and if a production string is needed, we will run 5 1/2" casing. If caves are encountered at surface, we will run approximately 100' of 10" conductor.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
