

OIL CONSERVATION COMMISSION

SANTA FE, NEW MEXICO

Miscellaneous Reports on Wells

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below.

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL	X	REPORT ON PULLING OR OTHERWISE ALTERING CASING

March 24, 1951

Notice of intention to do the work ~~was~~ (was not) submitted on Form C-102 on..... 19.....

and approval of the proposed plan ~~was~~ (was not) obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

After drilling ahead, we acidized with 1,000 gallons of acid from top of the pay at 433 feet to the total depth 437 feet, using The Artesia Chemical Company. The acidizing increased the production from five barrels per day to 20 barrels.

THEORY OF THE EARTH

CHAPTER I

THE EARTH AND ITS HISTORY

The Earth is a planet of the solar system, and its history is a record of the changes which have taken place in its structure and composition since its formation. The history of the Earth is divided into three main periods: the primary, the secondary, and the tertiary. The primary period is the earliest, and is characterized by the formation of the Earth's crust and the development of the primary life. The secondary period is the middle period, and is characterized by the development of the secondary life. The tertiary period is the latest, and is characterized by the development of the tertiary life. The history of the Earth is a record of the changes which have taken place in its structure and composition since its formation.
