(State or Territory)

The elevation of the derrick floor above sea level is 4025 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Objective: Deviation at approximately 8300', will test all shows encountered
Casing: 100' 1 3/8"-cemented to surface; approximately 600' 10 1/4" well to be started with cable tools to look at all productive possibilities in the upper beds. If no oil or water is encountered below the 10 1/4" casing, it will be cemented to surface. If oil or water is encountered below that depth, 8 1/8" casing will be run to approximately 1000' and we will attempt to pull the 10 1/4" casing. But in any event, the water production string will be cemented to surface. If production is indicated at total depth, 5 1/2" oil string will be run.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
