DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a well with cable tools to a depth of 420 feet unless oil and gas in commercial quantities is encountered at a lesser depth. All casing set will be cemented by approved methods of the U. S. Geological Survey. A 7" string will be cemented with 25 sacks at 410 feet.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
