PROBLEM SET 10
Due: Friday, November 10, 2017
This problem set is due on Friday, November 10, 2017. It consists of 10 problems. The first 8 problems are from the textbook, and the last 2 problems are from the course materials. The problems cover a range of topics in classical mechanics, including energy, momentum, and angular momentum. The problems are designed to be challenging and to test your understanding of the concepts covered in the course. The problems are also designed to be interesting and to provide a good challenge for students. The problems are also designed to be relevant to the course and to provide a good challenge for students. The problems are also designed to be relevant to the course and to provide a good challenge for students.

10/10

1. A particle of mass m moves in a circular path of radius R with a constant speed v . Find the magnitude of the centripetal force acting on the particle.

2. A particle of mass m moves in a circular path of radius R with a constant speed v . Find the magnitude of the centripetal force acting on the particle.
