(State or Territory)The elevation of the derrick floor above sea level is **3600** ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We drilled this well to a total depth of 3382 without encountering any oil or gas shows. We landed 371 feet of 10 3/4" casing to shut off casing and water encountered at 190-95 feet. Per our oral conversation with Mr. Kneuf on July 29, 1960, we have plugged the well as follows: Filled with mud from TD to 1770; put a cement plug 1770 to 1720; filled with mud to 985; put a cement plug 985 to 930; filled with mud to 425; put a cement plug 425 to 375; filled with mud to surface and cemented cellar, put up regulation marker and cleaned up the location. The 10 3/4" casing was all recovered.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
