DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location to test through the Queen sand or to an approximate depth of 1800 feet unless commercial production is encountered at a lesser depth.

We propose to run approximately 475 feet of 8 5/8" - cementing with 50 sacks and run 4 1/2" casing for production string cementing with 100 sacks. We will set through the pay zone and perforate the pay zone for treatment.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
