Artesia, New Mexico.

Dear Sir:

The well located in sec. 4-175-28E
in the SE SE, this well known as our
#1 Red Gulch. This well is one of
our storage wells, and is tied into
our 8" mainline to the Red Lake compressor
station. During the winter months the pressure
on the mainline drops to less than 300#
and at this time the well feeds gas into
the line.

Please advise if we can supply further
information on this well.

Yours Truly
Weeley Severson
Southern Union Prod. Co.
