We propose to use the following strings of casing and to land or cement them as indicated.

If changes in the above plan become advisable we will notify you before cementing or landing casing. We estimate that the first productive oil or gas sand should occur at a depth of about **1960** feet.

Additional information:

The reason for not making location in Center of 40 acre tract was because center location was on hill-side, so we had to move east from center 160' to have desirable location for drilling site.
