DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On July 27, 1959 we ran 2122' (64 Joints) of 7" OD 8rd thrd mixed new 20# JS and used 23# JS casing to 2124' and cemented with 150 sacks neat cement.

After allowing to stand cemented for 72 hours we pressured up on casing to 3000 psig. We then drilled plug, bailed hole down and re-ran bailer.

As shut-off proved complete drilling was resumed.

Cementing and pressure testing was done by Denton Oil Well Cementing Company.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
