DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

WE PROPOSE TO DRILL THE ABOVE WELL AS FOLLOWS:
OBJECTIVE: Penrose Sand (Queen)
TOTAL DEPTH: Approximately 2000'
METHOD OF DRILLING: Cable tools to total depth.
CASING PROGRAM: Will run approximately 400' of 10 3/4" of casing and obtain formation shut-off. If surface water is encountered in sufficient quantities, will cement 10 3/4" with 50 sacks. If water is encountered in the Red Sand section of Queen formation will run approximately 180' of 7" of casing and mud with Aquagel and crude oil. If commercial production is indicated a production string of 5 1/2" of casing will be run and cemented immediately above the pay horizon.
DRILLING CONTRACTOR: Hedden Drilling Company.
DRILLING OPERATIONS TO COMMENCE: On or about September 10, 1959.
The oil string should be cemented with sufficient cement to protect the salt zone from the Red Sand water.
I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
