Dear Sir:

In reference to our conversation on June 21st, regarding producing our Federal ~~Well~~ #2 well through the casing.

This well is located in Section 1, Township 16S, Range 30E in the SW $\frac{1}{4}$ of NE $\frac{1}{4}$ of Section. Well completed with 4 $\frac{1}{2}$ " 9.50# casing set at 3092' and cemented with 130 sacks. The Casing pressure shut in 250# and flowing 175# through Dowell frac head. Well produced 400 barrel oil thru 24/64 choke in 24 hrs., Perforated interval 3061 to 3079', producing formation is the Premier.

We were unable to run tubing in this well at the time of completion without killing well, we would like to have permission to produce well through the casing for a short period of time until we can remove the Dowell frac head and run tubing.

Yours very truly,

Wesley M. Swanson
