Federal "pm"
Well No. **6-3** is located **3300** ft. from **XX** line and **1980** ft. from **IX** line of sec. **3**

C. lot 15, Sec. 3 **168** **30E** **N.H.P.M.**
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

W. Henshaw Grayburg Ext. **Eddy** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **3882** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a 2875' Grayburg sand test, using cable tools all the way.

10 3/4" surface casing will be cemented in anhydrite just above the top of salt at approximately 500', using 75 sacks.

8 5/8" will be mudded in anhydrite at approximately 2185' for a Queen water shut off.

A 5 1/2" oil string will be cemented at approximately 2840' with 100 sacks.

All casing will be run and cemented, using procedures approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
