DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This test was spudded September 14, 1959, and drilled to T. D. 283' in red beds. A crevice was encountered at 240', and the hole took off crooked below it. While filling up and re-drilling, the upper portion of the hole around 30' - 40' caved in, causing a fishing job.

This hole was impossible to work with further, so the contractor filled the hole and collar with rock and sand and skidded the rig 35' due east.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
