Undesignated Edley New Mexico  
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3776 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In November 25, 1956 we ran 2736' of 7" 30 23# and third new J-55 sections casing to 2734' and cemented with 100 sac cement preceded by heavy mud to surface.

After allowing to stand cemented for 72 hours we bailed hole down, drilled plug and reran bailer. Is shut-off proved complete, drilling operations were resumed.

Cementing was done by Denton Oil Well Cementing Company.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company General American Oil Company of Texas
