Well No. 1-Boyd is located ³³⁰~~550~~ ft. from ☒ line and 330 ft. from ☒ line of sec. 10

S4/4 T-16 R-30E N.M.P.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
West Henshaw Wichita Kelly New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 2114 ft. ground

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Re-entry is to be made into the Boyd Federal #1, a plugged and abandoned well, in the above location and the plugs drilled out as they are located. Then regulation 7" casing (surface) will then be run and cemented with 75 sacks, in side the 8 7/8" casing already in the hole at approximately 386'. Then 4 1/2" regulation casing will be run to 2900' and cemented with 50 sacks of cement or more. We then plan to perforate the Premier Formation as found in the West Henshaw Field and frac it with 20,000#. After cleaning out the well, 2" tubing will be run to the approximate top of the pay zone and completed according to regulations and the well capacity.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
