17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

1-8-80 Called Mr. George Stewart of the Artesia USGS office to discuss ways to seal the annular space between the surface casing and the oil string. Mr. Orthell Kinnibrugh met Mr. B.W. Weaver of the Oil Conservation Division, Artesia Office, with the following procedure decided.

A 1" pipe was inserted in the annular space a minimum of 4' below the top of the surface casing extending above ground level so as to be able to connect to the flow line if needed. This pipe was grouted in place with cement grout. Flow from the surface casing has ceased below ground level and is now flowing from the 1" pipe.
