ALTERING CASING ☐

ABANDONMENT\* ☐

(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Well is currently under repair. Csg. was collapsed @ 1959.  
Picked up 4" csg. swage and swaged down to 2247' and hit a bridge P.O.H. and picked up 4 1/2" csg. swage and swaged down to 2247' and hit bridge. P.O.H. picked up 43/4 csg swage and swaged down 2247' and tried to break bridge with swage but could not.  
P.O.H. picked up 45/8 bit and W.I.H. Hook up pump truck and tried to circulate w/ 150 bbls produced water @ 5bpm but could not circulate. Hole suspected where csg. was collapsed. P.O.H. with bit and ran impression block tagged bridge P.O.H. No marks on impression block. I think bridge is Iron Sulfide and Scale build up.  
Will run Hydro-Static bailer and attempt to clean out to top of liner. (2855') Which at that time we will check the integrity of the liner. If found to be good we will repair and test csg. as per B.L.M. requirements and put on injection. If we are unable to salvage hole we will commence plugging procedures.  
I will submit the proper formes before injecting into or plugging well.
