(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3774 ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to re-enter this plugged oil well, open to total depth and recomplate as a producer. The casing program planned is to run 8 5/8" to the top of the old 8 5/8" casing and either screw into the old pipe with a die nipple or attach with a Bowen casing patch. Also run 5 1/2" 11# casing to the top of the old 5 1/2" and to either screw into the old 5 1/2" casing or attach with a Bowen casing patch. Clean out to old total depth, run logs and complete as an oil well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
