(Field)	(County or Subdivision)	(State or Territory)	

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We pumped 110 gallons 15% regular acid followed with 500 lbs water and 110 gallons drake sol formation cleaner. Displaced acid into formation and spotted formation cleaner opposite perforations. Shut well in for 24 hours, displaced drake sol into formation, shut in 12 hours. We then reversed out to 2", reversing out water, frac sand and formation sand. Grabbed well down 500 ft and then dumped 35 gallons steelform BC. Put well on injection.

Injection first 24 hours 450 bbls at 1600-

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
