DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate casing points, and all other important proposed work)

Will drill with rotary to top of anhydrite at approximately 700 feet. Plan to set about 750 feet of 240 J55 2-5/8" surface casing cemented with estimated 200 sacks and circulated; a 7-7/8" diameter hole will be drilled to total depth of approximately 3000 feet. Plan to run, if completion is attempted, 3-1/2" 140 J55 casing to total depth and cement with approx. 200 sacks sufficient to fill hole back to about 1375 feet covering the red sand water zone. Completion is anticipated in the Lovington Premier and No. 10 zones between 1500 and about 1600; these zones, if present, will be fracked in stages. This treatment will be covered in detail in subsequent report.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
