DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We plan to drill a well to 3590' to produce the Grayburg San Andres sands. The proposed casing program is to set 685' of 8 5/8" 21# surface pipe at the top of the salt and cement with 50 sacks. The oil string will be 5 1/2" 11# J-55 casing set to total depth and cemented with 200 sacks. The sand zones are to be perforated and treated separately with 20,000 gallons of gelled wtr and 20,000 lbs. of sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
