DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well has had typical history of loss in total fluid and oil production after breakthrough, due to scale deposition on sand face. We propose to shoot with 1 qt/lb to remove scale from the following intervals: 3200-33, 3290-3310, 3350-3400. We will then clean out to TD and chemical pack with polyphosphates.
