DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, casing points, and all other important proposed work)

Well has been inactive since October 1961 due to uneconomic oil production. We propose to plug back and recomplete in the Motor Zone. Work to be done as follows: Plug back to 3115 with pea gravel. Set with 18" oilwell plug. Treat down annulus by dumping 400 lbs. Vigor 400, mixed with 500 gallons water, 5 gals Vicos 1111 wetting agent, 5 gals paraffin solvent and leave shut in for 24 hours. Circulate for 12 to 24 hours and place on production for 7 day test.

If well does not prove productive, it will then be converted for injection into the Motor Zone.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
