1. The first part of the paper is devoted to the study of the

properties of the function

defined on the interval $[0, 1]$ by the formula

where $f(x)$ is a continuous function on $[0, 1]$ and α is a real number.

It is known that the function $f(x)$ is continuous on $[0, 1]$ if and only if it satisfies the condition

where ϵ is an arbitrary positive number.

Let us assume that the function $f(x)$ satisfies the condition

where ϵ is an arbitrary positive number. Then the function

is continuous on $[0, 1]$ if and only if it satisfies the condition

where ϵ is an arbitrary positive number.
