Square Lake \_\_\_\_\_ Eddy \_\_\_\_\_ New Mexico \_\_\_\_\_  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

During original drilling operations, a string of cable tools was lost. The top of the tools being at 3502. Extensive fishing operations were unsuccessful. Operator drilled by tools to T.D. 3598. Later fishing attempts were also unsuccessful and the tools were shot into the side of the hole. We propose to set cement plug back to 3420. Set whipstock and side track hole; drill new hole to T.D. 3750 and run 375' 4" liner from 3375-3750 and cement with 25 sacks; perforate Metex, Premier, and Lovington zones as indicated from electric log, using 4 shots per foot.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
