The elevation of the derrick floor above sea level is 3795 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to drill a 2800' Grayburg test, using cable tools all the way.

I propose to set 8-5/8" surface pipe at approximately 530' in the top of the salt, cementing with 50 sacks.

A 7" intermediate string will be mudded at approximately 2350' and later pulled.

The 5 1/2" oil string will be cemented at approximately 2775' with 100 sacks.

All casing will be run and cemented under methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
