

until sold.

E. Trash, waste paper, garbage and junk will be placed in a trash trailer and hauled to land fill. All waste material will be contained to prevent scattering by the wind.

F. All trash and debris will be removed from wellsite within 45 days after finishing drilling and/or completion operations.

8. Ancillary Facilities: None anticipated.

9. Wellsite Layout:

A. The wellsite has been surveyed and a 400' X 400' area has been staked and flagged.

B. The dimensions and relative location of the drill pad, mud pit, and trash trailer with respect to the well bore are shown on Exhibit "D" or Sketch of Well Pad.

C. The well pad will be resurfaced with caliche found in place.

10. Plans for Restoration of the Surface:

A. After re-completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing condition as possible.

B. An ungraded pits containing fluids will be fenced until they are filled.

C. After abandonment, all equipment, trash and junk will be removed and the location cleaned.

11. Other Information:

A. Topography: The wellsite is at an elevation of 3836' and situated on a plain.

B. Soil: The soil is sandy and rocky.

C. Land Type & Use: The vicinity surrounding the drill site is semi-arid rangeland and its primary use is for the production of oil and gas and for grazing.

D. Flora: Vegetative cover is sparse. Flora consists primarily of brush, range grasses and cacti.

E. Water Wells: There are no known water wells within two miles.

F. Residences and Other Structures: There are no occupied dwellings within two miles.
