17. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

This well is now downhole commingled in the Eagle Creek Permo Penn perms 6608-17', 6681-92', 6534-41' and 6546-50'. The Eagle Creek Strawn perms 7952-60' and 7975-78', and the East Eagle Creek Atoka Morrow perms 8338-65', 8430-40'. We retrieved the RBP and packer w/standing valve from between the Strawn and Cisco perforations. There are two packers in the well now. One above the Permo Penn and Strawn perforations and the other packer above the Morrow with a standing valve in it. A sliding sleeve at 8198' is open allowing the Permo Penn and Strawn to enter the tubing to flow along with the Morrow. The well is shut in waiting on Form 104 approval of the downhole commingle and proposed allocation formula for future production.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
